## PRACTICAL

### At least five experiments should be done:

1. Acetylation of primary amine (Aniline to N-phenylacetamide) using Zn dust.
2. Nitration of salicylic acid by green method (Using calcium nitrate and acetic acid).
3. Bromination of acetanilide using ceric ammonium nitrate/KBr.
4. Microwave assisted nitration of Phenols using  $\text{Cu}(\text{NO}_3)_2$ .
5. Detection of elements in organic compounds by green method (Sodium carbonate fusion).
6. Base catalyzed Aldol condensation (Synthesis of dibenzalpropanone).
7. Vitamin C clock reaction using vitamin C tablets, tincture of iodine, hydrogen peroxide and liquid laundry starch. Effect of concentration on clock reaction.
8. Photoreduction of benzophenone to benzopinacol in the presence of sunlight.
9. Diels Alder reaction in water: Reaction between furan and maleic acid in water and at room temperature rather than in benzene and reflux.
10. Preparation and characterization of nanoparticles (Cu, Ag) using plant extract.
11. Preparation of propene by following two methods or any other reactions like addition, elimination, substitution showing atomic economy can be studied
  - a. Triethylamine ion +  $\text{OH}^- \rightarrow \text{Propene} + \text{Trimethylpropene} + \text{water}$

## DSE-6.4 : DISSERTATION / PROJECT WORK

Full Marks – 100  
End Sem Project – 100

A project work is to be carried out by the student in consultation with the teachers of the department. The report of work (dissertation) in a standard format is to be submitted and presented for evaluation.

### Distribution of marks

- a. Project Report/Dissertation (Proper documentation of literature, data, discussion etc. and logical flow of work undertaken): 50 Marks
- b. Seminar/Presentation: 30 marks
- c. Viva voce: 20 marks

### Brief Guidelines to Project Work:

1. Students shall undertake the project work (experimental/theoretical) related to any branch of chemistry/Chemical science under the guidance of teacher(s) from the department or jointly with teachers/research personnel of other institutes.
2. The following activities have been outlined as guidelines (not exhaustive):
  - Physiochemical studies (pH, conductivity, turbidity, etc.) of different wetlands (ponds, lakes, river etc.)
  - Analysis of iron in pond / tube well / river water.
  - Analysis of Hardness of water samples.
  - Adulteration detection activities in food stuff and other edible items.
  - Extraction and preliminary characterization of useful chemicals (as far as possible) from plants.
  - Solubility, surface tension, and viscosity measurements of some solution of practical relevance, (cough syrup, soap solution, pesticides, fertilizers. etc.)
  - Pollution related activities (Industrial/Agricultural/Municipal etc.)
  - Nutrition related activities, (essential metal detection in food, cereals, pulses, fruits etc.).
  - Small synthetical work (inorganic/Organic/Polymeric compounds)
3. The UG level project work is a group activity, maximum number of students being limited to three. HOD to notify the name of teacher(s) for supervising the project work of each group. A teacher can guide more than one group, if necessary.

4. No two groups in the same institution are permitted to do project work on the same problem.
5. Each student shall prepare and submit the project report separately for evaluation. Two copies of project report are required to be submitted in bound form (spiral/paperback).
6. The project report shall be divided as:  
Chapter I: Introduction (Introduction on the topic, review of literature, objective and scope of the work)  
Chapter II: Materials and methods  
Chapter II: Results and discussion  
Chapter IV: Conclusions and Scope of future studies  
Chapter V: References
